

4. Confirmation

Items Before commencing system design, you are required to answer the following questions. Questions marked with a y are items newly identified through the review of reference materials and were not included in the initial CR description .

4.1 Contract Details and Field Mapping Purchase Agreement

(Automobile Purchase Agreement) — B2C 1 [Purchase

Agreement] The

current paper contract includes a declaration checklist (odometer tampering, flood history, repair history, defects, unpaid automobile tax, unpaid parking fines). In the electronic version, should these be interactive checkboxes that customers fill in themselves, or should they be automatically entered from Assist Forward 's AI assessment results (repair history judgment AI, mileage anomaly detection)? y Note that if data is automatically entered from Assist Forward 's data, it will be an important system integration point and is expected to reduce duplicate data entry.

A: Since this will be based on customer feedback, an interactive box is preferable.

2. [Purchase Agreement]

The current form includes a checklist of required documents (vehicle registration certificate, tax payment certificate, compulsory automobile liability insurance, recycling certificate, seal registration certificate, resident registration certificate, power of attorney, transfer certificate, etc.), and the number of copies and the date of receipt are recorded for each document. Should this section be included in the electronic contract? If so, should the document receipt be recorded/verified within the Assist Forward system , or should it be managed offline by simply printing it as a PDF? Please advise.

A: Only a check is required; recording the date of receipt is unnecessary. PDF printing is preferred.

3. The [Purchase

Agreement] Payment Breakdown section displays the contract amount, deducted automobile tax, outstanding loan balance, and net payment amount. Should these items be automatically calculated by the system from existing Assist Forward appraisal data, or should the store staff manually enter the amounts each time?

Assist Forward — Electronic Contract CR | BA Review Confidential —

For Client Review Only Page 5 **A: The loan balance is to be confirmed after the contract is signed, making it difficult to input at the time of contract. In addition, the conditions for deduction may change before the handover, which, due to the nature of electronic contracts, would necessitate a new contract. As a result, new issues arise, such as a shift in the contract date. As a countermeasure, we envision creating a confirmation document function in addition to the contract, and having the confirmation document exchanged again at the time of handover to determine the transfer amount.**

4 [Purchase Agreement]

In the current agreement, information on the owner and user is obtained separately (owner / user) in case the vehicle seller is not the registered owner. Should the electronic system also support this distinction? If so, should the system be designed to trigger a flow for identity verification and submission of additional documents? Vehicle Order Form and Invoice (Vehicle Order Form) — B2B

A: It is preferable to use the OCR data from the vehicle registration certificate for all sections regarding the owner and user.

5 [Purchase Order]

Currently, a single vehicle purchase order serves the dual purpose of both a purchase order and an invoice. Should this remain integrated in the electronic system, or should it be separated into two separate documents with independent document numbers? y

Separation would improve the accuracy of the accounting workflow, but would increase the complexity of document management.

A: Integration is fine.

6. [Purchase

Order] The current purchase order includes an acceptance of receipt terms and conditions (receipt confirmation section) at the bottom, which the purchasing dealer signs and returns via fax after the vehicle arrives. Should this be made into a separate electronic confirmation step (e.g., a "receipt confirmation" button in the Assist Forward app) and designed to automatically trigger a status update within the system?

A: A receipt confirmation form is not required, but it would be helpful if receipt confirmation could be made within ASSIST FORWARD.

7. [Purchase

Order] The current purchase order includes a headquarters management number. Is this the same identifier used in the existing Assist Forward system, or is it a new, independent document serial number assigned by the system?

Assist Forward — Electronic Contract CR | BA Review

Confidential — For Client Review Only Page 6

A: Currently, we are not using management numbers on a trial basis, so it is fine to assign new numbers.

4.2 Document Structure and Copy

Management 8

[Document Structure] Paper contracts consist of multiple copies, up to 6 pages in total: customer copy, store copy, headquarters report copy (5P — contract report), and vehicle receipt. How should the distribution of copies be handled in the electronic version? After the contract is concluded, should the system automatically distribute each copy via email or system notification, or should the store manually share each copy? y The

headquarters copy (5P) is particularly important for franchise management and may need to be automatically sent to headquarters after electronic signature.

A: As long as there are customer copies and store (company) copies, it's OK if only the title changes. It's fine as long as both can be converted to PDF. Regarding the terms and conditions, after the customer has viewed them on screen, they need to check a box to indicate they agree, and we want this to be reflected in the customer confirmation section of the contract.

9. [Document

Structure] The Vehicle Receipt (Vehicle Receipt, 6P) is a separate document signed by the dealer at the time of physical delivery of the vehicle. Should this be a separate electronic document generated and signed at the time of delivery? Or is it outside the scope of this change request?

A: It's fine if it's outside the scope.

10 [Document Variant] The

company-owned store version omits the headquarters report copy (5P) and the lower left marker section. Please check the following: (a) Are there any other content differences between the company-owned and franchise versions, such as signatories, legal clauses, or branding? (b) Is the franchise-specific buyer disclosure wording also removed in the company-owned version?

A: There are no differences regarding a. Regarding b, please let me know which part you are referring to.

4.3 Legal Validity and Electronic

Signature 11 [Legal —

CRITICAL] Article 2 of the current contract states that it is valid upon signature or seal. For the electronic version to be legally valid and exempt from stamp duty under Japan's Electronic Signature Law, a qualified electronic signature is required. Has the client obtained confirmation from their legal department regarding the applicable electronic signature

standards? Should the system integrate with a specific certified electronic signature service (e.g., GMO Sign, CloudSign, DocuSign

Japan) ? This item is a critical prerequisite for this feature. Failure to meet the qualified electronic signature requirements risks the contract not being exempt from stamp duty, thus undermining the primary business value of this feature.

A: Regarding this matter, we believe that following this flow—contract creation → sending a URL to the subscriber's email address or via SMS → subscriber signing on their device—will guarantee the identity of the person and make it valid as evidence. If this is incorrect, we would need to use services like GMO Signature, but we believe that would become too costly.

12 [Legal - Critical] These

Terms and Conditions have been supervised by the Japan Used Car Purchase Association (JPUC), with revision number 16KH00009 (revised July 2023). Will the electronic version of these Terms and Conditions require re-approval or re-supervision by JPUC ?

Are JPUC-certified electronic templates already available?

A: We will obtain re-approval from JPUC after completion.

13 [Signature Flow]

Regarding B2C purchase agreements: The customer signs as the seller, and the franchisee signs as the buyer. In the electronic workflow, will the customer sign on a tablet or terminal in the store during the appraisal, or will the contract be sent to the customer's email address for remote signing?

A: As I answered in Q11.

14 [Signature Flow]

Regarding the consignment sales agreement (Contract →): In the flow from seller FC → headquarters → buyer FC , who initiates the creation of the contract? Does headquarters review and approve it before it reaches the buyer, or is it automatically forwarded? What constitutes "acceptance" from each party? Is sequential signing (each party signing in order) required, or is parallel signing acceptable?

A: Both sellers and buyers consider everything from the perspective of headquarters.

4.4 Assist Forward System Integration

Assist Forward — Electronic Contract CR | BA Review

Confidential — For Client Review Only Page 7 15 [Integration] Purchase orders include bank transfer information

(Mizuho Bank, Yokkaichi Branch, Apple Auto Network account number). In the electronic version, should the bank account information be stored as master data in the system and automatically reflected in the invoice, or should it be entered manually each time?

A: We are planning to update it from the bank's master data.

16 [Collaboration]

The purchase order includes internal headquarters processing items (store name, contact person's name, payment confirmation date, sales entry) that are not displayed to the purchasing franchisee. Should the electronic system support a two-tiered display: one for the purchasing franchisee and another for internal headquarters processing that includes these additional items?

A: Since everything will originate from headquarters, it would be best to include the name of each franchise store.

17 [Integration]

The vehicle data items on the order form (year of manufacture, vehicle name, chassis number, color, mileage, recycling fee, automobile tax) are:

The data obtained through AssistForward 's assessment flow largely overlaps with the data already acquired. Should contract generation be triggered directly from completed assessment records, with vehicle data automatically entered? In that case,

the main UX flow would be as follows: Assessment approval → [Generate Contract] button → Contract automatically entered → Signature request.

A: Yes

18

[Integration] Should the generated contracts be saved and viewable as a contract archive/history within the Assist Forward system ? Is an

automatically assigned document serial number necessary for each contract for tracking and auditing purposes? 4.5

Scope and Phases

A: It is required because it must be kept for 7 years. The serial number is also required.

19. [User] Who are

the target users who initiate contract generation within the system? — Are they store sales representatives, store managers, or headquarters administrators? Is role-based access restriction necessary (e.g., only store managers can confirm/submit contracts)?

A: All users, down to the person in charge level, are the starting point. Access restrictions are not necessary.

20.

[Language] Should the generated contracts be in Japanese only, or should they be bilingual (Japanese + English)? Are there any standard legal templates already in use that the system should completely replicate?

A: Japanese only is fine.
